WEDE5020 Assignment Part 1

Name: Buhle Manyike

Student Number: ST10521872

1. Organisation Overview

Name:Mdukazi Projects (trading as MzilaCom)

Brief Organisation History

Mdukazi Projects is a Soweto-based information and communications technology company established in 2006, originally operating under the name Khulacom Communications. The company has grown to become a comprehensive ICT solutions provider serving individuals and organisations across South Africa. Over the years, Mdukazi Projects has expanded its service offerings to include telecommunications infrastructure, internet connectivity, security systems, and IT support services.

The company has established itself as a vendor to major South African fixed line network operators and has completed numerous projects involving fibre longhaul, FTTH installations, router installations, data centre power connections, microwave installations and LAN cabling. Mdukazi Projects has built one of the best fixed wireless access networks in South Africa, providing home and business customers with reliable connectivity solutions at competitive prices.

Mission Statement

Mdukazi Projects' mission is to provide essential information, communications and technology solutions that enhance profitability, competitiveness and efficiency for individuals and organisations. The company delivers state-of-the-art security systems, dedicated internet access, network monitoring solutions, fibre connectivity and comprehensive IT support services tailored to meet the diverse needs of businesses, schools and homes.

Vision Statement

Mdukazi Projects envisions becoming a leading ICT infrastructure and solutions provider in South Africa, recognised for delivering carrier-grade connectivity, innovative security solutions and reliable IT support services. The company aims to bridge the digital divide by providing accessible, high-quality telecommunications and technology solutions to underserved communities while maintaining excellence in service delivery.

Target Audience

Mdukazi Projects serves a diverse client base including small to medium-sized enterprises, large corporations, educational institutions, telecommunications companies, internet service providers and residential customers. Businesses require reliable internet connectivity, network infrastructure, security systems and IT support to maintain operational efficiency (Chaffey & Ellis-Chadwick, 2023). The company particularly targets organisations in need of dedicated internet access, fibre connectivity, CCTV security systems, LAN cabling, network monitoring and comprehensive IT support solutions.

2. Website Goals and Objectives

The primary goal of the Mdukazi Projects website is to establish a strong digital presence that effectively communicates the company's comprehensive range of ICT services. A professional website enables organisations to showcase their service offerings, build credibility with potential clients and generate business leads (Kingsnorth, 2022). The website will present detailed information about services including CCTV security systems, dedicated internet access, fibre connectivity, LAN cabling, network monitoring, VPN solutions, hosting services and IT support.

The website will function as an information hub where visitors can learn about the company's capabilities, view service specifications, understand technical features and benefits, and initiate contact for quotations or service inquiries. Clear presentation of services helps potential clients make informed decisions about their ICT requirements (Nielsen Norman Group, 2023).

Key Performance Indicators (KPIs)

The effectiveness of the website will be evaluated using several Key Performance Indicators (KPIs). These metrics provide valuable insights into website performance and user engagement (Chaffey & Ellis-Chadwick, 2023).

Website Traffic – tracks the total number of visitors accessing the website.

Bounce Rate – measures the percentage of visitors who exit after viewing only a single page.

Average Session Duration– indicates the average time visitors spend exploring the website.

Conversion Rate – monitors the percentage of visitors who complete desired actions such as submitting contact forms or requesting quotations.

Search Engine Ranking – This will assess the website's visibility on search engines for relevant ICT service keywords.

Page Load Speed – measures how quickly pages load, impacting user experience and search rankings.

4. Proposed Website Features and Functionality

The Mdukazi Projects website will incorporate features designed to deliver an optimal user experience while comprehensively presenting the company's diverse service portfolio. A modern, professional interface with intuitive navigation will enable visitors to easily locate information about specific services. Responsive web design will ensure the website functions seamlessly across desktop computers, tablets and mobile devices (Nielsen Norman Group, 2023).

The Website pages

Mdukazi Projects (www.mdukaziprojects.co.za) – Proposed 7-Page Structure

Page 1: Home Page

The Home Page introducing Mdukazi Projects will have includes a service category and icons such as client logos or project numbers. A "Why Choose Us" section uses simple icons and short text to communicate reliability and expertise. Smooth scroll navigation and subtle CSS animations add interactivity. This page shows skill in brand-consistent design, responsive layout techniques, and performance-optimised asset loading (Kingsnorth, 2022).

Page 2: Services Page

The Services Page organises offerings into clear categories: CCTV Security, Dedicated Internet, Fibre Connectivity, LAN Cabling, Network Monitoring, VPN Solutions, Hosting, and IT Support. Each service includes a descriptive overview, key features listed with custom SVG icons, and technical specifications in clean tables. Simple tabs built with vanilla JavaScript let users switch between service categories without page reloads. This page shows ability to structure complex information clearly, add lightweight interactivity, and keep visual consistency across content-heavy sections (Nielsen Norman Group, 2023).

Page 3: Solutions by Industry Page

This page tailors service information to specific sectors: Businesses, Schools, Telecom Providers, and Residential Customers. Each industry section shows relevant use cases, recommended service bundles, and benefit-focused copy. A simple "Get a Custom Quote" button uses JavaScript to pre-fill the contact form with the selected industry. This page shows skill in creating targeted user experiences, adding conditional interactivity, and designing content for different audience needs (Weinschenk, 2020).

Page 4: About & Credentials Page

The About Page presents company history, mission, vision, and team information. A timeline component built with CSS shows milestones since 2006. A "Certifications & Partnerships" section displays logos of affiliated networks and vendors using a responsive grid. A "Our Approach" subsection outlines the project method with illustrated steps. This page highlights skill in creating narrative-driven layouts, using CSS-only interactive elements, and presenting corporate information with visual clarity (Norman, 2023).

Page 5: Contact & Support Page

The Contact Page includes a multi-field enquiry form with dropdowns for service selection, client-side validation, and success messaging. Additional sections provide physical address details, support email/phone information, and a service area map placeholder. A "Common Questions" accordion addresses frequent inquiries about installation, pricing, and support. The form is structured for easy backend integration. This page shows ability to build robust, accessible forms, create intuitive user flows, and design support-oriented interfaces (Chaffey & Ellis-Chadwick, 2023).

Page 6: Projects/Case Studies Page

This page showcases completed infrastructure projects with before/after descriptions, technical challenges solved, and client outcomes. Each case study has a project image, title, sector tag, short summary, and key results displayed as statistics. A filter system using JavaScript allows sorting by sector or service type. This page demonstrates skill in presenting technical project data visually, implementing client-side filtering, and building trust through evidence-based content (Nielsen Norman Group, 2023).

Page 7: Resources/FAQ Page

The Resources Page provides helpful content such as service guides, connectivity tips, and security best practices. Content is organised into expandable sections using simple JavaScript accordions. A search function lets users find answers by keyword. Downloadable PDF guides are linked with clear icons. This page shows ability to structure informational content for easy access,

implement lightweight search functionality, and create value-added resources that support user decision-making (Kingsnorth, 2022).

Wire Frames

The website will include dedicated sections for each service category: CCTV and security systems, enterprise ICT solutions, fibre and wireless internet, LAN cabling, network monitoring, VPN services, hosting, and IT support. Each service page will provide detailed information about features, benefits, technical specifications and application scenarios. A contact section will facilitate enquiries, service requests and quotation inquiries.

Design and User Experience

User experience (UX) is fundamental to effective website design. A well-organised interface with clear information architecture helps users find relevant information efficiently and encourages engagement with the content (Weinschenk, 2020).

Colour Scheme

The proposed colour scheme features orange, beige and white. Orange conveys energy, innovation and enthusiasm, while beige provides warmth and professionalism. White ensures clarity and readability. Strategic colour selection influences user perception and reinforces brand identity (Nielsen Norman Group, 2022).

Typography

The website will utilise bold, modern fonts for headings and clean, highly readable fonts such as Open Sans or Lato for body text. Effective typography enhances readability, establishes visual hierarchy and improves the overall user experience on digital platforms (Nielsen Norman Group, 2023).

Layout and Design

The layout will employ a grid-based design system to maintain visual consistency, balance and alignment across all pages. Grid systems are industry-standard tools for organising content logically and creating professional, aesthetically pleasing web interfaces (Norman, 2023).

Example Wireframe Illustration

Figure 1: Example website wireframe layout (adapted from Nielsen Norman Group, 2023).

6. Technical Implementation

The website will be deployed using reliable web hosting infrastructure with domain registration through a reputable South African provider. The domain mdukaziprojects.co.za will be configured with appropriate DNS settings to ensure optimal performance and reliability.

The website will be developed using HTML5 for semantic structure, CSS3 for modern styling and responsive design, and JavaScript for interactive functionality. Performance optimisation techniques will be implemented to ensure fast page load speeds. Security measures including SSL certificates will be deployed to protect user data and enhance trust.

7. Timeline

The complete website development process, from initial design through to final deployment and testing, is projected to take approximately six weeks.

8. Budget

Domain Name: R80

Website Production:R1000

Hosting: R200

Website Maintenance:R200 per month
